Solution Details

Solution description

The final product is a Custom game that introducing a basic operations in computer science

We think it should be part of the compulsory study in elementary school.

The benefit will be that in everyone will have the opportunity to experiment with computers and understand whether it is worthwhile to engage in it in the future.

Solution context

The problem is the lack of people who can work at Tech companies and knows Computer Science.

The challenge that we solving is Increasing the number of people who will work at high-tech companies in the future by introducing them to Basic concepts in computer science from an early age.

Solution target group

The target group of the solution is children in elementary school.

The solution will affect on the future of the children if he decides that he loves the subject and will want to continue learning computers at the future.

They benefit to the high-tech industry by having more people engaged in the profession.

Solution impact

Increasing the number of people who will work at high-tech companies in the future by introducing them to Basic concepts in computer science from an early age.

Solution tweet text

We give everyone a chance to learn computers from early age

Solution innovativeness

Our solution will be more Childrn friendly than the others app then can be found on the market, we want to teach the operations in computer science with games and Challenges.

Solution transferability

Our solution can be used also as a standard computer game that every child can enjoy it and play at home regardless of the compulsory study.

Solution sustainability

The solution will be assimilated as part of the study material and can be used as a permanent subject in each student's system.

It will be for the long term.

Solution team work

The work in the team was very successful and everyone contributed to the issue, we would continue to work together in the future.
