Solution description

1. PROBLEM: Which problem are you trying to solve? Describe this problem in a few sentences. *
Category: The problem we notice among many students is the inability to organize their school time, submit homework, study for exams, and moreover, adapt themselves to school life and combine it with their leisure life.

As a result, we came up with the idea that if there was a system that combined all our tasks and schedules and could help us organize them more efficiently, it would make it easier for each student and even improve their daily lives both mentally and emotionally, and maybe even improve their academic achievements. Time Management.

The problem we notice among many students is the inability to organize their school time, submit homework, study for exams, and moreover, adapt themselves to school life and combine it with their leisure life.

As a result, we came up with the idea that if there was a system that combined all our tasks and schedules and could help us organize them more efficiently, it would make it easier for each student and even improve their daily lives both mentally and emotionally, and maybe even improve their academic achievements.

2. OUTCOME: What is the concrete change you want to achieve directly through the solutions created? It can be described as a change or comparison to the initial state *

Outcome: users will be more arranged and have control over time, and not have the time control you!

Today, lots of students have busy schedule which makes them forget their daily chores, both academically and in their private lives.

Today, there are numerous systems and applications that provide a solution, but for each area separately.

This system will be one stop shop that can manage all the assignments in 1 place.

3. TECHNOLOGY: Which emerging technologies can be used to reach the outcome you described in #2? Will one technology or a combination of different technologies be needed? *

We are going to use several technologies.

we will be able to take a SaaS platform like office 365 and a system for managing lessons and synchronizing them.

Also, we will use cloud compute to run our software application.

4. IDEA: What is your project/product idea about? Create a short description combining #1, #2 and #3. -Who are the users? In which context/s can your idea be applied? *

Schedule of assignments and tests that is synchronized with your personal life (Study-Life Balance) - The goal is to adapt the learning work required to the course of their personal lives: work, leisure, and daily tasks.

The users are all the people who need a learning path that is aligned with their personal life routine. The app (say it's an app) arranges time windows for you to learn according to your schedules so you can submit your assignments and be ready for exams on time. (For example - sends reminders for submission, sends a reminder at the beginning of the day that you have two hours of work today, reserves regular time windows a week before a test, etc.)
