### **Solution Details**

## **Solution description**

Our main goal is to make education available to students in a global arena. Access to education is a key factor for every student. This will help the children to follow the progress of the lesson through this app as long as they are not able to go to class. They will also be able to watch the teacher's lesson for free whenever they want. It also helps sick children and children with traffic problems to have the same rights as other students.

Our solution will help reduce the percentage of people in the world who cannot get an education. This will lead to the dominance of education in many countries. Schools will approach it more responsibly in order to get a high rating. Parents will be able to read to their children in a safe environment, and children will be able to watch lessons from their own homes as the impact of a live lesson. Students will be more eager to read through the interesting learning environment here. In addition, many new specialties will be created through the new school app.

## **Solution context**

We will need a team for the program because we need people with special programming knowledge to create the program. At the same time, the idea requires a certain amount of investment. It is necessary to support it in the global arena and bring it to the app form by collecting the necessary documents to create an application. This idea should also be supported by schools that meet modern requirements so that they can be taught. We need to provide cameras to download video lessons to the program, without which it is impossible to implement the idea. It is important to have the Internet everywhere so that children without the Internet can get an education, but we do not have any ideas to help. It is to make it accessible only to those who have a phone and a laptop but cannot come to school due to illness, traffic problems, or financial problems.

## **Solution target group**

Our target group is students that they cannot come to school because of problems like illnesses, family, road problems or lack of schools, etc.

## **Solution impact**

Our solution will help reduce the percentage of people in the world who cannot get an education. This will lead to the dominance of education in many countries. Schools will approach it more responsibly in order to get a high rating. Parents will be able to read to their children in a safe environment, and children will be able to watch lessons from their own homes as the impact of a live lesson. Students will be more eager to read through the interesting learning environment here. In addition, many new specialties will be created through the new school app.

## **Solution tweet text**

The student who has a problem with having education in school will be able to join or watch the lessons of classes through our app just with the internet connection.

## **Solution innovativeness**

Having an idea in the form of an application is a great advantage in terms of innovation. In the new course environment, they will be able to continue their education as they wish. Thus, the new course system will be recognized all over the world.

## **Solution transferability**

Transferability is a very convenient part of our idea. Through our idea, we will be able to keep in touch with foreign schools. And it will help that students will be able to see the learning environment of each country. If many schools join this idea, the integration of knowledge will advance even more magnificently. Students will be able to re-watch the lesson and ask questions to the teachers. As students are free in the course they enter, they will be able to communicate with students from other schools. As a result of this development, meetings can be held in a scientific position. Students who want to learn a foreign language will participate in teachers' classes for free. This will help to study the environment there.

## **Solution sustainability**

The continuity of this idea is that there have been many innovations in the online education system related to the global situation. And we think that this is an app that the new generation is interested in and useful to use. Young people will have more opportunities in the online learning environment.

## **Solution team work**

As a team, we worked hard on the idea that education should be possible for many children. Sabin found the idea in our team. Hajiaga added many innovations to the idea. Aytach and Amil made adjustments on this idea. Business plan and website Sabina, Aytach made the presentation, Hajiaga in the process of filling out the form, Amil also made diapers, and we prepared. We worked very integrated as a team.
